

TITLE OF INVENTION
COMPOUND POST FRAME

ABSTRACT OF THE DISCLOSURE

A compound post frame with securing devices. It provides a 3 point clamping method to united small post, pipe, rods or tubing in marriage to form a strong single compound post. Other items can be attach easily and the post replaces any post. A fence unit that can be utilized as a bracing method for fences. A brace that in length forms a rail fence or framing for structures. A post that is adjustable in height and can have an attachment for 360 degree revolvment and slot method for securing objects.

Claims

I claim:

1. A frame for joining T-Post, rods, pipe, post tubing or any elongated material together to form a post or tower. ~~The device is formed from rigid material of pipe or channel shaped material forming frames. Flat rigid material of round, trapezoid, square or rectangle material forms a frame.~~ Size, shape, number of items joined and material of all components may vary to form variants of post and frame.

2. The said device of claim one has cutouts in or on the material for attaching rods, post,

Charles D. Lyon

pipe, tubing or any elongated material.

3. The said device of claim one has bolt holes of variable size to attach items both in making said device and in operation.

4. The said device of claim one includes clamping devices.

5. The devices of claim one connecting elongated items form a brace unit for fences and when used at several levels, forms a fence of itself.

6. One form of the holes of claim three with clamping device add items in line of elongated material such as antennas or gate support and at ninety degree to said line braces and connectors.

7. The round device of claim one attaches a three-hundred sixty degree, turning attachment with the use of holes of claim three.

~~8. The said device of claim one in some of its variants of material, shape and size requires connectors of rigid material with or without holes of claim three.~~

9. The device of claim one in some of its forms will join two of its rigid material forms of variant shape and size by bend out parts of one too the other.

10. Additional cutouts of claim two extend the elongated material.

~~11. The device of claim 9 of the bend out model forms a sample pattern for use in making entertainment puzzles of lighter material.~~

~~12. A fencing system forming a braced fence with the use of claim 1.~~

~~13. The device of claim 1 can be used to form and as steps of a ladder for climbing fences, towers or stands.~~

14. The said device of claim 1 with extender of claim 10 forms system for taller post, tower or horizontal barricades.

~~15. The joining of items to form a post, tower or barricade.~~

~~16. The joining of two or more items with a channel clamping system.~~

~~17. A system using claim 1 for framing of steel in cement construction.~~
